Forwardable summary for enterprise buyers

SENSE → REASON → DECIDE → ACT → LEARN

What it is

MIZ OKI is not an AI assistant. It is a decision-making system that senses live data, reasons across complex systems, decides optimal actions, executes them under governance, and learns from outcomes.

What it does

- Runs high-confidence operational decisions (not just recommendations)
- Reduces latency, leakage, and manual oversight
- Integrates with existing infrastructure (no rip-and-replace)
- Logs every action with traceability and human override

Impact snapshot

Outcome	Typical Result
Decision latency	↓ 50–75x
Operational leakage	↓ 20–40%
Payback	~3 months
Control	Always retained
